

Name: _____

Period: _____

Jelly Belly Classification Lab

Choose 5 Jelly Bellies from the cup at your table. In the description column, describe your beans. Cut each bean in half and describe the inside of the bean, too! Using the dichotomous key, determine the flavor of your jelly beans. Record its flavor stated in the chart.

DO NOT EAT THE JELLY BELLIES AT THIS POINT!!!

When you finish describing all 5 beans, you may taste $\frac{1}{2}$ of each bean. If the flavor you wrote is correct, place a check in the comment box and eat the rest of the bean. If the flavor does not match what is stated, check the key once more with the rest of the bean and see if you made a mistake in the key. If you made a mistake, correct your description and note "Mistake" in the comment box. If you did not make a mistake in the key, you have discovered a new species! Note this in the comment box as "New Species" and see if you can determine the new species (flavor).
